Work experience

Brunel | Amsterdam

sept. 2016 – heden **Fullstack software developer**

jan. 2018 – apr. 2020 **Project | VW Infra – JavaScript developer**

Developing and implementing frontend and backend of react application which extracts critical quantities from Autodesk civil designs and imports this into an external configuration database. The application is part of an automation project, to detect and analyse changes in the quantities of used materials within civil engineering projects.

Front end development within the Relatics platform. Relatics is a configuration database where requirements of clients for civil engineering projects are registered and managed. For every project the is a workspace created, which is specific for all the users of rhe project. Making this workspace userfriendly was mainly the task for this project.
